Exigo Amplifier Channel License

Description

The Exigo Amplifier Channel License allows you to connect an Exigo Network Amplifier to an AlphaCom server over IP. The license provides access to a wide set of public address features.

An Exigo Network Amplifier has multiple channels. You can choose to use these channels individually or combine channels in superchannels. You would need one license per channel that you need to address from AlphaCom. This means that combined channels only require one license.

An Exigo Channel License use same amount of AlphaCom resources as an IP station. The maximum number of IP station licenses + Exigo Amplifier Channel Licenses supported by AlphaCom XE Audio Servers are 552.
