NIM-4FXO

Cisco 4-port FXO Network Interface Module

This item has been replaced with the new upgraded Voice Gateway:

✔ [Grandstream Voice Gateway \(zenitel.com\)](https://zenitel.com)

**DISCONTINUED**

Description

The Cisco Foreign Exchange Office (FXO) interface is an RJ-11 connector that allows an analog connection to be directed at the public switched telephone network's (PSTN's) central office or to a station interface on a private branch exchange (PBX). The FXO sits on the switch end of the connection. It plugs directly into the line side of the switch so the switch thinks the FXO interface is a telephone.
