ITCS-RS

Reset Unit for Inelteh Call System

- Reset unit for Inelteh Call System
- Manual call reset at location
- Prevents premature clearing of alarms
- Designed for hospital and cold room environments

Description

The ITCS-RS is a reset unit used within the Inelteh Call System, allowing calls to be acknowledged and reset at the call location. It is primarily installed in hospital and cold room settings onboard vessels to ensure that calls remain visible until checked and manually cleared.

- Ensures call verification – Calls remain active until manually reset at the location.
- Designed for shipboard use – Reliable operation in hospitals, cold rooms, and other safety-critical areas.
- Compatible with ITCS-A – Works with ITCS-A call systems where call acceptance and reset are separate.

This unit enhances safety by ensuring that alarms are only cleared after verification, preventing missed calls for assistance.
