Description

The EOLZ01 is a tuned load for use with the V2000 impedance monitoring surveillance function.

By adding a load at the end of the speaker circuits, surveillance is achieved to the end of the line as the disconnection of the EOLZ01 causes a significant change in line impedance. Up to four EOLZ01 devices can be used on a single amplifier interface card. The EOLZ01 device is intended to be mounted either inside a speaker enclosure, or, if space does not permit, an additional junction box. Each box contains 10 devices.
