  - ✓ Customize each alarm command (every alarm ON and OFF commands)

Description

The Alarm Interface Module is used to provide a mute (or turn-off) TV option and to send a dynamic message to the screen during PA/GA.

The Alarm Unit programmable module offers powerful features and advanced technology in a compact, modular enclosure. This unit is based on the RP2040 microcontroller from Raspberry Pi which brings signature values of high performance, low cost, and ease of use to the microcontroller space. The unit is easily expandable with various expansion boards.
