### Description

Zenitel's V2000-POK01 kit is designed to be installed inside Zenitel's V2000/INTEGRA amplifier mainframes. It facilitates access to spare battery-backed power, addressing the limitation of the standard AUX output on the frame, which is fused at a maximum of 2A. The battery-backed DC output from the V2000-POK can be utilized to provide power to Zenitel's Beacon Driver Unit (BDU01).

The kit consists of two interface cards, one installed in the front and one in the rear of the amplifier mainframe. Each kit occupies a single slot in the mainframe and offers a fused DC output up to 9A @ 24 VDC. The actual available power output of the card depends on the configured amplifier power and the PAVA system's battery backup requirements.

### EN 54 Certified

Additionally, adhering to industry standards, the BDU solution is EN 54-16 certified as part of the Zenitel PAVA system ensuring compliance with industry standards.
