Description

The IP311 is a compact and reliable 4-port FXO gateway that bridges traditional PSTN lines and analog devices with modern VoIP infrastructure. It enables smooth migration from legacy telephony to IP-based communication systems while maintaining compatibility with existing equipment such as analog phones, fax machines, paging interfaces, and legacy control devices.

Designed for maritime, offshore, and industrial environments, the IP311 ensures a reliable bridge between your ship's internal communication system and the outside world. Our FXO solution ensures that every call – whether to shore, satellite or platform, flows seamlessly through your existing PBX or IP-PBX network.
