ZENITEL IP SPEAKERS

Key **Applications**

Exceptional Audio, Indoors and Out

From indoor to outdoor environments and from corporate buildings to road tunnels, our IP speakers supports a wide range of installation spaces. Especially designed for optimal performance in challenging acoustics environments, they deliver an exceptional sound experience for speech and background music.

Keep everyone informed and secured

With up to 123dB SPL output, our IP speakers deliver clear PA announcements for operational, security, and employee paging purposes, even in high noise environments. They can be individually addressed, providing cost-effective PA solutions for medium and small projects without losing zone granularity.

Interactive perimeter protection

IP speakers enhance perimeter security by adding an extra layer of protection. With audio interactivity, staff can pro-actively intervene using live warning messages during an incursion while maintaining a safe distance. Thanks to ONVIF compatibility, audio warnings can be triggered directly from a video management system, effectively deterring trespassers, loiterers, and other unwanted activities.
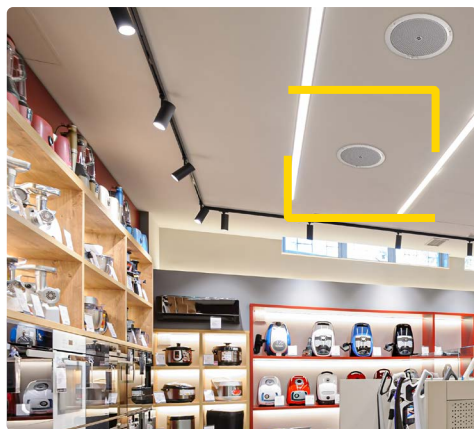

Streamline your operations

With built-in speaker-as-a-microphone technology, our IP speakers offer talk-back capabilities for staff on the move, while enabling push-to-talk functionality for control room operators.
This allows operators to coordinate with the workforce through live speech, ensuring smooth daily operations.
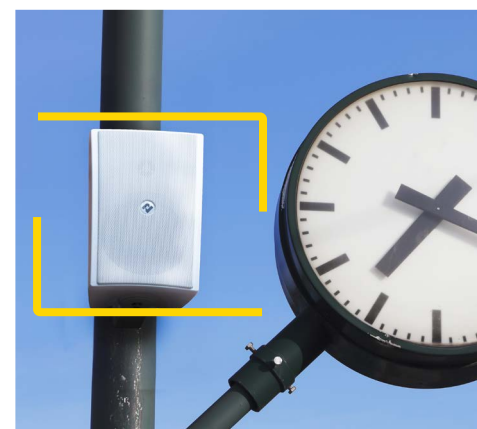

Provide a welcoming experience

With high-fidelity audio output, our IP speakers delivers exceptional quality for background music or promotional announcements for commercial applications such as a retail store, helping you enhance the customer experience.

Feature Highlights

One System, A Unified Voice

Our IP speakers, when combined with the Zenitel Connect Pro platform, offer truly unified communication possibilities, supporting a wide range of use cases, including public address, emergency notifications, security warnings, and background music.

By enabling seamless communication among security personnel, control room operators, and staff, IP speakers transform your reactive security systems into proactive and interactive solutions.
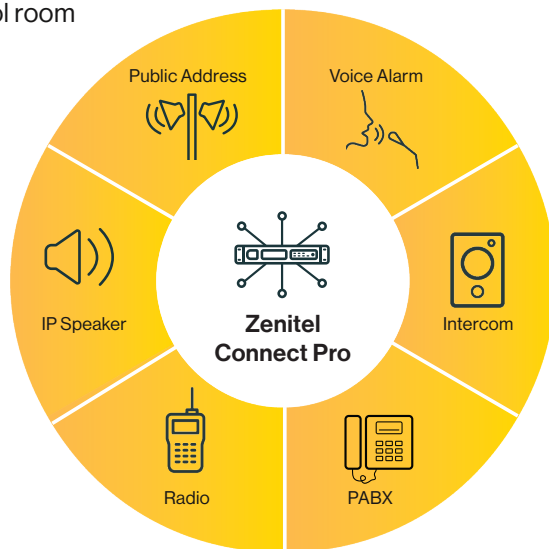

Innovative power design

Our innovative power supply design, featuring an energy storage mechanism, delivers a full 30W output for voice applications even with standard PoE, eliminating the need for a PoE+ switch. Our IP speakers are optimized to significantly reduce idle power consumption, helping you save on energy costs.

Integration into VMS

Thanks to ONVIF compatibility, you can easily integrate our IP speakers into video management systems. You can thus immediately react to an incident with audio warnings directly from a VMS, effectively deterring trespassers, loiterers, and other unwanted activities.

Speaker-as-a-microphone technology

With built-in speaker-as-a-microphone technology, our IP speakers offer talkback capabilities for staff on the move, while enabling push-to-talk functionality for control room operators.
