

Zenitel Door Entry Communications

Hear, be heard,
and be understood
at every door

Effortless entrance, Exceptional clarity

With a strong focus on a human-centric approach to building designs, architects create designs that not only functionally efficient but are inherently rooted in addressing diverse needs. An inclusive design creates a better experience for facility occupants and increases their loyalty as tenants..

An entry point to any building serves as the first line of defence in security systems. A smooth and welcome entry, especially in an area with a lot of street noise, sets up the experience for the rest of the building.

As facility owners seek to secure assets and streamline operations, through technology while having a high focus on inclusive design, Zenitel's innovations **in door entry communications**, combined with **Zenitel Connect Pro — the industry's first Unified Critical Communication Platform** — pave the way for unifying communication needs under a single platform for building owners.

All our entry-point intercoms are ONVIF-compatible, making integration with video-based security systems easier and increasing awareness of your assets.

Zenitel's Door Entry Communications

Remote visitor verification

Simplified Access at the door

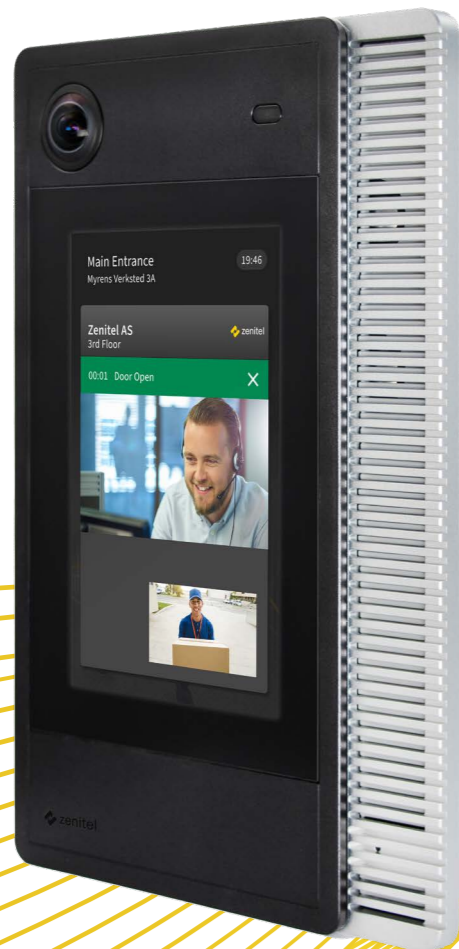

Remote management and control

Better situational awareness

Perfected Sound, Elegantly designed, Sustainably built

Built on Zenitel's industry-leading sound technology, the **Zenitel Display Door (ZDD-1)** intercom features a speaker and microphone array to deliver an immersive sound experience, while high sound pressure levels make it ideal even for high-noise environments. The bi-directional video communication enables face-to-face interaction, fostering a sense of connection, while also supporting the needs of sign language users.

The **Zenitel Display Door (ZDD-1)** features an intuitive touch display with an easy-to-use UI/UX, making navigation simple and efficient for all users.
