DATASHEET

SMART MANAGER

SMART Manager is provided as of any of the options below:

- Out of the box delivery together with a hardware from COBS. We supply a 19" Rack server dedicated for this purpose with all things pre-installed.

- As a downloadable software package from our web. Install it in a VM-Ware environment and with the server or PC of your choice.

DESCRIPTION

Smart Manager is a complete solution for managing, controlling, updating the SMART devices during their entire life cycle.
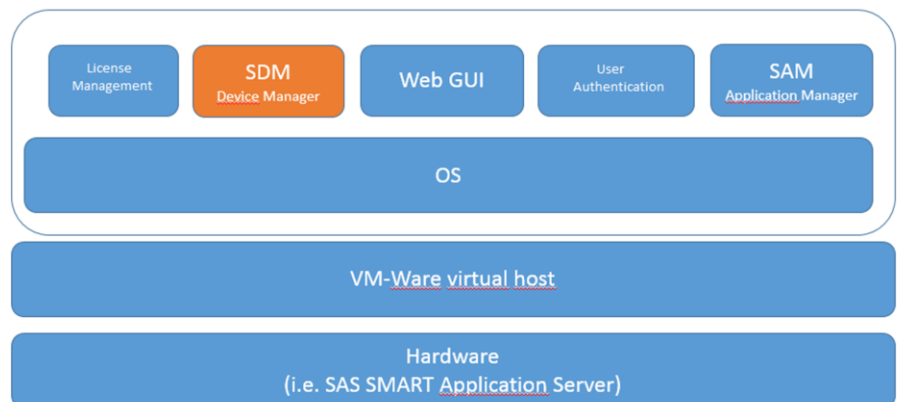

Designed to simplify and ensure the operation, maintenance, stability and availability of our customers' systems.

Administered via a web interface.

Smart Manager is built on modern web technology and offers resellers, administrators and end-users a smart application platform optimized (but not limited) for systems up to approx. 200 units. The main purpose of the SMART manager is to host all licenses and applications dedicated for the site. The SMART1 devices shall be seen as working tools and the purpose is to provide an efficient tools that has a long lifecycle and a clear ROI.

Smart Manager is required in all installations that require some form of license management. All data is distributed over WiFi this is why it is necessary to have an Ethernet network and at least one WiFi Access Point (AP) per system.
