

**Milestone Interconnect is a unique system concept that allows all XProtect® video management software (VMS), the Milestone Husky series of NVRs and Milestone Arcus™ appliances to be connected with Milestone's premium software, XProtect® Corporate.**

Milestone Interconnect provides a flexible way to centrally operate multiple surveillance installations across geographically dispersed sites. With this scalable concept, customers can build their surveillance solutions by linking cost-efficient Milestone solutions at remote sites with the advanced surveillance functions of XProtect Corporate at the principal site.

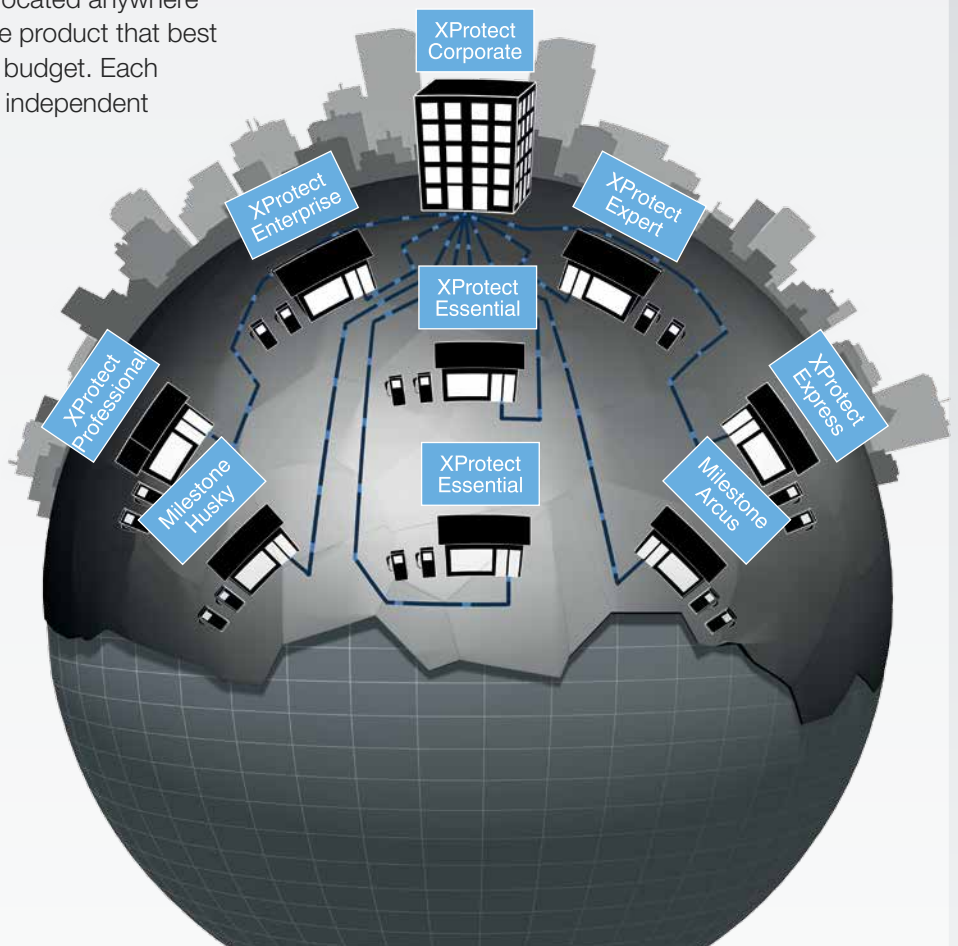

With Milestone Interconnect, the central system uses XProtect Corporate to connect to remote XProtect, Milestone Husky or Milestone Arcus systems. When remote sites are interconnected, operators in the central system can access video and receive alarms from the connected sites, creating one unified surveillance system.

The remote sites can be located anywhere and operate the Milestone product that best matches their needs and budget. Each interconnected system is independent and video can also be accessed and managed locally.

Milestone Interconnect enables users who have deployed a number of standalone video surveillance installations to centralize daily operations, including monitoring video and handling evidence.

# A solution for now and in the future

Milestone's broad range of products with simple to highly sophisticated features give users the freedom to choose a solution that best suits their immediate budget and needs.

Over time, smaller installations may expand and surveillance sites multiply, requiring advanced functionality, centralized monitoring and management.

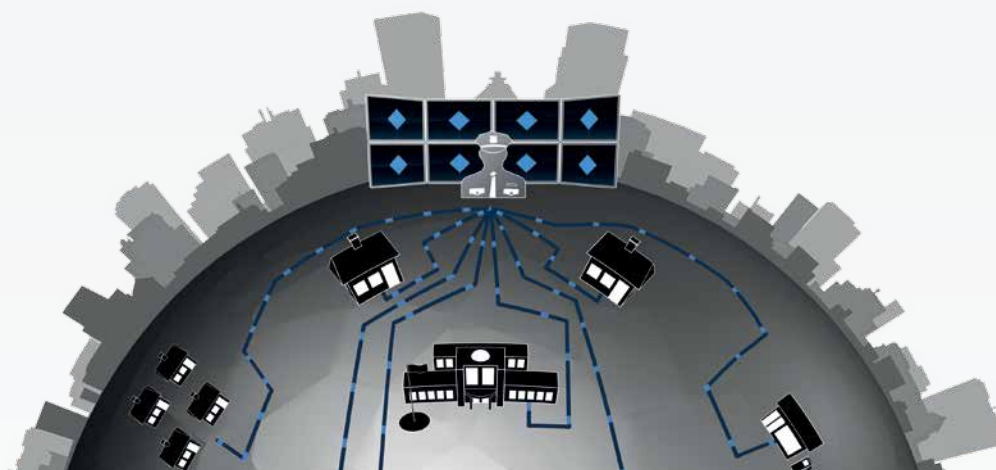

Milestone Interconnect prepares these installations for future growth. Connecting with a central XProtect Corporate site brings a geographically dispersed system together in one cohesive surveillance operation.

Independent cameras and sites can operate without compromise, while Milestone Interconnect links individual cameras or whole sites to XProtect Corporate, providing operators with top-of-the-line features, a complete overview and seamless management of multiple, remote locations.

Be assured that if advanced surveillance capabilities are required in the future, users can depend on Milestone Interconnect as a solution to meet those additional demands.

## Benefits of Milestone Interconnect

- ✓ Supports all **XProtect VMS, Milestone Husky NVR solutions and Milestone Arcus embedded appliances**, offering the ultimate flexibility to choose the most suitable products based on needs and budget
- ✓ Provides central surveillance for faster incident handling
- ✓ Lowers system maintenance operational and staff costs since systems can be managed remotely and on-site visits are reduced
- ✓ Reduces the need for local security personnel at each remote site because central operators have full access to live and recorded video from all remote sites
- ✓ Creates efficiency since the individual cameras and sites that are monitoring the most critical areas can be interconnected
- ✓ Optimizes storage using available remote and central storage and network resources
- ✓ Quickly creates evidence by uploading video from remote sites to the central system

# Milestone Interconnect creates a world of opportunities

## Cost-efficient retail solution

Retail chains with many stores spread out across a region, such as gas stations and convenience stores, gain cost-efficient remote surveillance using Milestone Interconnect. The headquarters can monitor all local stores, providing 24/7 surveillance and continuous security while using fewer resources.

Milestone Interconnect also provides easy and fast deployment of the surveillance operation. After setting up one of the remote sites, settings can be copied and applied to all of the sites, helping reduce installation costs.

## Mobile surveillance solution for transportation

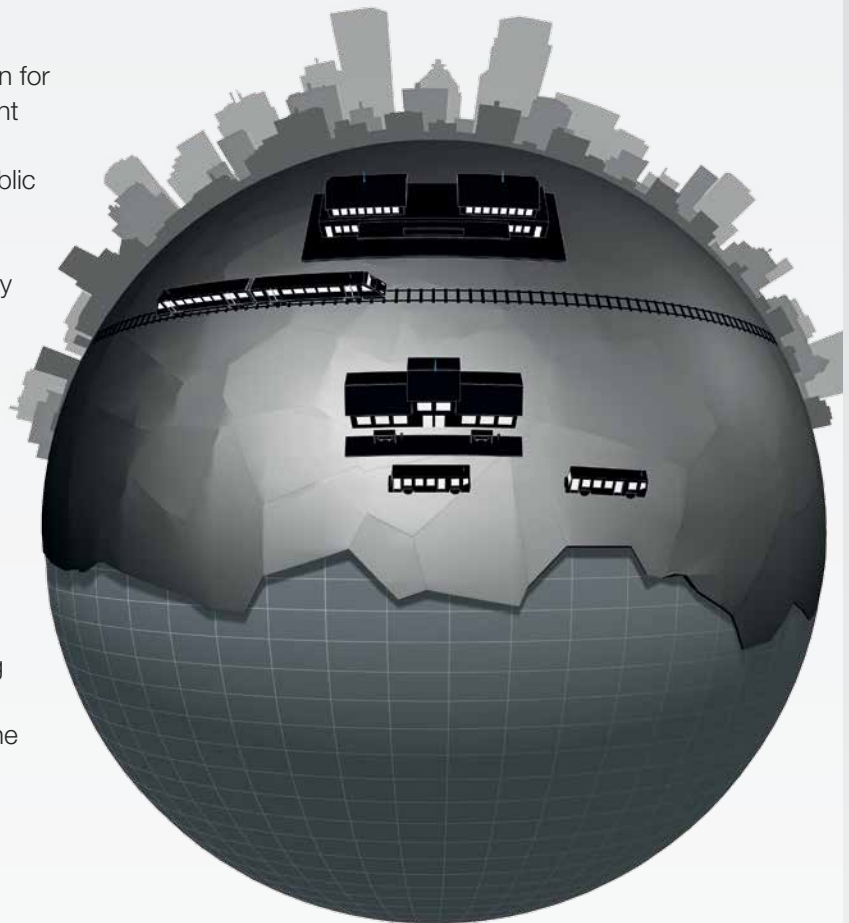

Milestone Interconnect is an ideal solution for transportation vehicles with an intermittent network connection. Recordings can be stored onboard cameras and when a public transport vehicle arrives at a garage with network connection, relevant video is transferred to the central system either by schedule or on demand. This eliminates the need for manual video handling and physical media storage, helping reduce costs.

Independent onboard video systems mounted in vehicles can be part of a larger surveillance solution. Milestone Interconnect makes it possible to combine video from the onboard system with video from stations, allowing operators to seamlessly track people and objects inside public transit and in the station.

## Optimized solution for alarm centers

Alarm centers can address different customer segments by interconnecting with surveillance installations ranging from just a few cameras to several hundred. Situational awareness functions, including interactive maps and prioritized alarm lists, help alarm centers to reduce operational costs by combining on-site patrolling with central surveillance. Alarm operators can also validate an alarm before dispatching a guard.

Milestone Interconnect provides proactive alarm monitoring because alarm notifications are sent to the central system when there are issues in the connected systems.

# Milestone Interconnect: Enhancing XProtect Corporate

## High performance for high security

XProtect Corporate is a powerful IP VMS designed for large-scale, high-security deployments. Its single management interface enables efficient management of the system and all connected cameras and security devices, regardless of the system size or if it is distributed across multiple sites. For systems demanding supreme situational awareness and precise response to incidents, XProtect Corporate has interactive maps linked to alarms and built-in support for Milestone's video wall functionality.

XProtect Corporate provides the ultimate system reliability for high-security installations. Edge Storage support combined with Failover Recording Servers and redundant management servers, ensure video recordings are never interrupted and access to the system is always maintained.

### About Milestone Systems

Founded in 1998, Milestone Systems is the global industry leader in open platform IP video management software. The XProtect platform delivers powerful surveillance that is easy to manage, reliable and proven in thousands of customer installations around the world. With support for the widest choice in network hardware and integration with other systems, XProtect provides best-in-class solutions to video enable organizations – managing risks, protecting people and assets, optimizing processes and reducing costs. Milestone software is sold through authorized and certified partners. For more information, visit: [www.milestonesys.com](http://www.milestonesys.com)
